		252	1127	262	763	1571

Grand total for these 5 diseases : 3,975.

## STATISTICS OF DEATHS.

Some clergymen persist in not sending certificates of death to our Board either because they do not exact them when burials take place or for some other reason.

In the summary of deaths published in the report for last year (the 11th annual report) it will be observed that in order to calculate accurately the percentage of mortality in the Province, we have had to leave aside a population of 92,398 souls in connection with which the persons in charge of the registers of civil status have sent us no returns at all or only very incomplete ones.

Here is the list of the municipalities which make up that number of 92,398:

- County Argenteuil.—Carillon, Grenville, Grenville and Augmentation, Harrington and Union, St. Adolphe d'Howard.  
 " Bagot.—Acton Vale, St. André d'Acton, Ste. Christne.  
 " Beaconsfield.—St. Victor de Tring, Aubert Gallion.  
 " Beauharnois.—St. Etienne.  
 " Bellechasse.—Beaumont.  
 " Bonaventure.—New Carlisle, New Richmond, Paspebiac, Port Daniel West, Ristigouche.  
 " Champlain.—St. Sévérin, St. Tite.  
 " Charlevoix.—Ste. Agnès, St. Irénée, St. Simon.  
 " Chicoutimi.—Chicoutimi town, Chicoutimi township, Ste. Anne de Chicoutimi.  
 " Compton.—Clifton West, Ste. Edwidge.  
 " Deux-Montagnes.—St. Hermas.  
 " Drummond.—Drummondville, Grantham township, Kingsey, St. Germain de Grantham.  
 " Gaspé.—Cap Chat, Cap des Rosiers, Douglas West, Etang du Nord, Havre Aubert, House Harbour, Malbaie No. 1, York.  
 " Huntingdon.—Franklin.  
 " Iberville.—Iberville, Sabrevois, St. Athanase.  
 " Lake St. John.—St. Jérôme, St. Méthode, St. Michel de Mistassini, St. Prime, Sacré-Cœur.  
 " L'Assomption.—Laurentides, St. Lin.  
 " Lévis.—St. Joseph de Lévis.  
 " Matane.—Dalibaire et Romieu, Petit Métis.

health authorities and of the inspectors of butter and cheese factories. The plumbing must be in accordance with the requirements of article 21 of the general regulations respecting the salubrity of industrial establishments.

29d.—After each day's work, all the rooms of the butter or cheese factory shall be at once cleaned. Such cleaning shall include the washing of the floors and also of the walls if they are dirty, in all the rooms referred to in article 29a.

29e.—Every butter or cheese factory shall be disinfected once a year previous to resuming operations in the Spring, and previous to the first of April, in the case of establishments in operation throughout the year. The inspectors of syndicates of butter and cheese factories shall prescribe the methods of disinfection to be followed.

29f.—In the case of butter and cheese factories established prior to the date of the promulgation of the present regulations, a delay of one year is granted for the application of the provisions of articles 29a and 29b and a delay of three months for the application of article 29c.

29g.—In other respects, the general regulations respecting the salubrity of industrial establishments shall apply to butter and cheese factories.

#### Contagious diseases.

The table published below shows the number of contagious diseases reported to our office by the municipal secretary-treasurers during the year 1906-1907 and their distribution by months, counties and municipalities. As the municipal secretaries do not always give the exact number of cases, we have had to estimate to the best of our ability the words "some cases" "many cases" "epidemic" which many reports contain.

	Counties	Municipalities	Smallpox	Diphtheria	Scarlet fever	Typhoid fever	Measles

Grand total for these 5 diseases : 4,436.

### Pressing development of the Board's work.

The Board of Health has now formulated nearly all the by-laws needed by rural municipalities for their sanitary administration, and it has always endeavoured by means of numerous publications, pretty frequently by inspections, to educate the public and thereby facilitate the work of the local authorities. Its efforts have not been without results and, in a general way, hygiene has made great progress in the Province.

Much, however, remains still to be done to bring all the municipalities in the Province, now numbering 1,040 to earnestly carry out sanitary measures. To enlarge its sphere of action and enable its plans for intervening, more directly than it has hitherto been able to do, in the direction of municipal health organizations, the Provincial Board needs a very much larger subsidy than that now at its disposal.

We feel the need of increasing the number of inspections in municipalities. So far, owing to the smallness of its subsidy, the Board has had to content itself with authorizing the most urgent inspections either in connection with epidemics, or with the examination of plans of water-works and sewerage systems or the selection of sites for cemeteries. In future we wish to make and systematically carry on a sanitary survey of the whole territory of the Province in order to stimulate the zeal of the local authorities. The inspector would be an inquirer and an educator at the same time. After ascertaining the sanitary condition of the locality visited and the measures taken by the local authorities, he might point out whatever might have hitherto escaped their attention, correct any defects in their organization, give them temporarily the assistance of an expert-sanitarian for the solution of difficult questions. He would take advantage of his visit to a rural municipality to request the members of the medical profession to take more interest and give more aid to the municipal health authorities, especially with regard to the struggle against contagious diseases, for their concurrence is essential to a municipality for the control of epidemic diseases. Finally, by means of lectures which always bring a large audience in our country districts, he would interest the public in sanitary matters and this would probably bring around valuable cooperation to the great benefit of public health in such localities.

There are a great many water-works in the Province which were constructed previous to the establishment of the Board. The examination of all these (i. e. inspection of the water-shed, analyses of the water) for the purpose of ascertaining their value and of advising the interested parties as to the defects to be corrected, should be undertaken by the Board without further delay. The increased number of outbreaks of typhoid fever throughout the Province make it our duty to do so.

(at each birth) should contain a paragraph on the responsibility of families towards their children, and should produce an improvement in those, who for want of education, fail to realize their most sacred obligations, and have until now, uselessly sacrificed the lives of their children.

For those who still persist, in not calling in a physician, the Board should render burial without a medical certificate more difficult. The Board has already drafted an amendment to the law in this sense, and it would be advisable to hasten its adoption by the Legislature.

Finally the Board should call the attention of the Honourable Sollicitor General to the unnecessary sacrifice of human lives, which a few lawsuits for infractions to article 210 of the Criminal Law, would certainly reduce in number.

The above report respectfully submitted,

ELZEAR PELLETIER,  
Secretary.

#### CONTAGIOUS DISEASES.

The table published below shows the number of contagious diseases reported to our office by the municipal secretary-treasurers during the year 1907-08 and their distributions by months, counties and municipalities. As the municipal secretaries do not always give the exact number of cases, we have had to estimate to the best of our ability, the words "some cases", "many cases", "epidemic", which many reports contain.

Grand total for these 7 diseases : 5,074.

**2° Degoix's Apparatus and Farrer's Apparatus.**—These apparatus involve the application on a small scale, of biological purification by percolation of the sewage after a preliminary treatment in a septic tank. The cuts sufficiently explain their working.

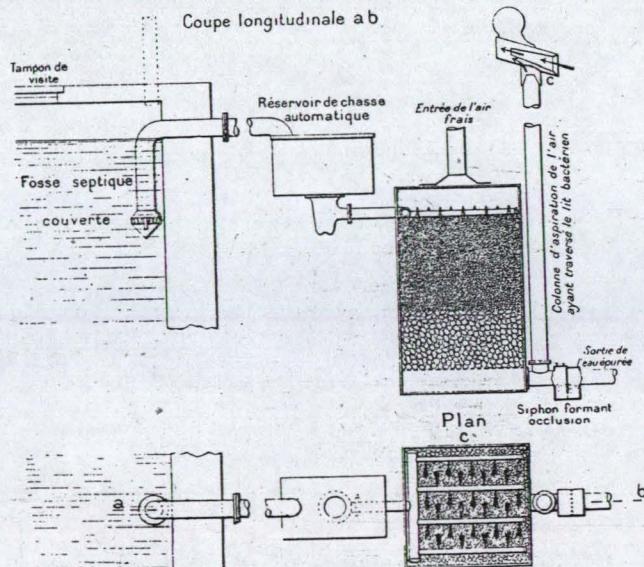

Fig. 21. Degoix's system of biological purification for isolated habitations

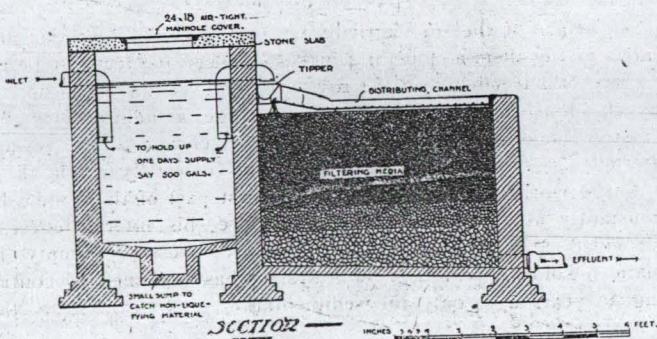

Fig. 22. Farrer's installation, which can dispose of 500 gallons of sewage per day.

## CONTAGIOUS DISEASES.

The table published below shows the number of contagious diseases reported to our office by the municipal secretary-treasurers, during the year 1908-1909, and their distribution by months, counties and municipalities. As the municipal secretaries do not always give the exact number of cases, we have had to estimate to the best of our ability, the words: "some cases", "many cases", "epidemic", which many reports contain.

(For July 1908, see page 36.)

September 17th . . . . .	St. Aime of Shipton . . . .	Site for a cemetery.
September 17th . . . . .	Asbestos, village . . . . .	Site for a cemetery.
September 18th . . . . .	Beauport . . . . .	Intake of a proposed water supply.
September 19th . . . . .	L'Ange Gardien, Montm. . .	Intake of a proposed water supply.
September 20th . . . . .	Beauceville . . . . .	Well for water supply.
September 20th . . . . .	Beauceville . . . . .	Intake of a proposed water supply.
September 21st . . . . .	Chaudière . . . . .	Outlet of a proposed sewerage system.
September 22nd . . . . .	City of Montreal . . . . .	Outlet of a proposed sewerage system.
September 22nd . . . . .	Beauport . . . . .	Inquiry re vaccine.
September 22nd . . . . .	Warwick, village . . . . .	Outlet of a proposed sewerage system.
September 23rd . . . . .	La Jeune Lorette . . . . .	Intake of a proposed water supply.
September 24th . . . . .	Bienville . . . . .	Intake of a proposed water supply.
September 24th . . . . .	St. Romuald . . . . .	Intake of a proposed water supply.
September 27th . . . . .	Shawenegan . . . . .	Intake of a proposed water supply.
September 27th . . . . .	Louiville . . . . .	Intake of a proposed water supply.
September 28th . . . . .	Berthierville . . . . .	Nuisance caused by a tannery.
September 29th . . . . .	Town of Joliette . . . . .	Outlet of a proposed sewerage system.
October 1st . . . . .	Ste-Anne de Bellevue . . . .	Intake of a water supply.
October 4th . . . . .	Ste-Britte des Saults . . . .	Outbreak of scarlet fever.
October 5th . . . . .	Lacolle . . . . .	Site for a cemetery.
October 5th . . . . .	Lacolle . . . . .	Site for a cemetery.

size of existing water purification works, it shall notify such city, village, corporation or person owning or operating such water supply of its findings and give them an opportunity to be heard and after such hearing if the Provincial Board of Health determines that improvements or changes are necessary and should be made, said Board shall notify the city, village, corporation or person owning or operating such water supply, to change the source of supply or to install and place in operation water purification works or device satisfactory to said Board, or to change or enlarge existing water purification works in a manner satisfactory to said Board, within a time to be fixed by said Board.

III. Whenever the Provincial Board of Health finds, upon investigation, that any water or sewerage purification works, on account of faulty construction or inefficient operation, is not producing an effluent as pure as might reasonably be obtained from such plant, and by reason of which any public water supply has become dangerous to health, or any stream or body of water has become offensively polluted, or has become a public nuisance, said Board shall issue an order to the city or village, or the corporation or person having a charge of or owning such plant to secure an effluent as pure as might be reasonably expected from such plant and satisfactory to said Board; and if such city or village, or such corporation or person fails, for a stated period after receiving such order, to secure such an effluent, the Provincial Board of Health shall order the city, village, corporation or person to appoint within ten days, and pay the salary of a competent person, to be approved by said Provincial Board of Health to take charge of and operate such works so as to secure the results demanded by the Provincial Board of Health.

IV. If in any case any order of the Provincial Board of Health, made in pursuance of the provisions of this Act, is not acceptable to any city, village, corporation or owner affected thereby such city, village, corporation or owner shall have the right of appeal as follows, to wit:

The necessity for and reasonableness of such order may be submitted to reputable and experienced sanitary engineers, one to be chosen by the city, village, corporation or owner to which such order of the Provincial Board of Health applies and the other chosen by the Provincial Board of Health who shall not be regularly employed by said Board, and who shall act as referee engineers. If the engineers so chosen are unable to agree that they shall choose a third engineer of like standing and the vote of the majority shall be final and binding. The referee engineers, herein provided for, shall have power to affirm, modify or reject, the order of the Provincial Board of Health submitted to them and their decision, which shall be rendered within a reasonable time shall be accepted by the Provincial Board of Health, and shall be enforced by said Board in the manner provided for in this Act. The fees and expenses of said referee engineers shall be equally divided between the city, village, corporation or owner requesting such reference and the Provincial Board of Health.

V. Any municipal corporation ordered to do works in virtue of any of the preceding sections is hereby empowered to provide funds, by loan or otherwise, to meet the expense of compliance with the order.

VI. If any municipal corporation, private corporation or person, shall fail or refuse for a period of thirty days, after notice given him or them by the Provincial Board of Health of its findings, to do and perform any act or acts required of him or them to be done and performed under the authority of this act, such municipal corporation, private corporation or person shall be liable to a fine of five hundred dollars and, if the order still remains unexecuted three months after the first prosecution has been instituted, to an additional fine not exceeding twenty-five dollars for each day the infringement of the order continues.

Prosecutions may be instituted by the Provincial Board of Health.

#### CONTAGIOUS DISEASES.

The table published below shows the number of contagious diseases reported to our office by the municipal secretaries treasurers, during the year 1910-1911, and their distribution by month, counties and municipalities. As the municipal secretaries do not always give the exact number of cases, we have had to estimate to the best of our ability, the words: "some cases", "many cases", "epidemic", which many reports contain.

Counties	Municipalities	Smallpox	Diphtheria	Scarlet fever	Typhoid fever	Measles	Varicella	Whooping Cough	Cerebro-spinal meningitis	Tuberculosis	Poliomyelitis

Grand total for these diseases . . . . . 8,568

4° Knowing that dark rooms will be placarded as non habitable, they shall probably no longer appear in the plans of future structures, or at least, the number of rooms which are presently submitted to the municipal sanitary authorities for approval on the pretence that they are only "trunk rooms", will decrease as by a charm.

5° Finally, the proprietor who shall continue to pretend that he only intends to build "trunk rooms" will be taken at his word, and, honest or not, he will only have to assent when the sanitary authorities will duly insert, into the requested building permit, the words: "provided such rooms be placarded as non-habitable."

A stencil of this placard could be made, so as to paint it on the wall, and thus prevent it from being "involuntarily" (?) removed by the proprietor or the tenant.

#### Contagious Diseases.

The following table shows the number of contagious diseases reported to the Board by municipal health authorities during the year 1912-13 and their distribution by months, counties and municipalities. As the municipal officers do not always state the exact number of cases, we have had to estimate to the best of our ability the words "some cases", "many cases", "epidemic", which many reports contain.

### *Typhoid Fever.*

Typhoid Fever is increasing more and more its epidemic ravages amongst the populations whose drinking water comes from aqueducts which draw their supply from water courses. The reason is that people do not conform to the principle long established by hygiene, that all surface waters: rivers, water courses, lakes, etc., are safe only on condition that they be filtered.

Filtration is necessary, even should the populations settled above the intake were to treat their sewage, before allowing it to empty into the water course. As a matter of fact, no matter how good the system may be which is employed for the treatment of sewage, the system will never be able to protect, at all times, an intake situated down the river. True, it may give complete protection when the waters to be treated are of normal volume; but in time of rain and during the thaw, the purification plant will be insufficient, because in order to be practical, it is necessary to limit capacity to from three to six times the normal volume of sewage. When the volume of water exceeds this proportion, a portion of the excess must flow into the water course without having been given treatment at the plant.

It is precisely because it is ever necessary to provide for filtration for every aqueduct having its source of supply in surface water, that the question of the obligatory treatment of sewage reduces itself to the rendering obligatory the treatment of the sewage that is to empty into a water course above an intake, only when the volume of sewage is such that it might create an overcharge on a filter, which might have been or might be installed further down in the stream below the point where the sewage empties into the water.

The localities situated on the banks of the River Richelieu suffered greatly from Typhoid Fever during the year just passed. As a temporary means of protection, we insisted upon the employment of the process known as the chlorination of water; but if these municipalities wish to protect themselves for good, it will be necessary for them, without further delay, to consider filtration of the water of their respective aqueducts.

The extensive epidemic of typhoid in the city of St. John's led to the suggestion that anti-typhoid vaccination be there encouraged and the Board made use of the good offices of Dr. E. P. Benoit who, since the summer of 1913, had placed himself at the disposition of the Board in order to conduct a demonstration of the efficacy of anti-typhoid vaccine.

We herewith reproduce the report made to the Board of Health by Dr. E. P. Benoit, concerning his operations at St. John's.

## V

Article 3917 now reads as follows:

3917. Whenever the head of any household or of any establishment whatever, knows or has reason to believe that any person dwelling in his home or in the establishment under his control, has small-pox, varioloid, Asiatic cholera, plague, typhus, diphtheria, croup, scarlatina, typhoid fever, measles, tuberculosis, leprosy, cerebro-spinal meningitis, infantile paralysis, whooping-cough, rubeola, chicken pox, purulent ophthalmia neonatorum or any other disease which the Superior Board of Health has designated by by-law, he shall, within twenty-four hours, notify the same to the municipal sanitary authority of the locality in which he resides or has his establishment.

## VI

Article 3918 now reads as follows:

3918. Any physician who ascertains or has reason to believe that any person whom he is called upon to visit is infected with any of the diseases set forth in article 3917 shall, within twenty-four hours, give notice thereof to the municipal sanitary authority of the locality in which such diseased person may be.

## VII

The following sentence is added at the end of article 3920:

"After the appointment of district inspectors by the Superior Board of Health of the Province, the said board may order that the notice in question in this article may be given to the inspector of such district instead of being given direct to the head office of the Superior Board of Health."

## VIII

New article added after article 3921:

"3921a. When an officer or representative of the Superior Board of Health finds that any municipality has neglected or refused to carry out the measures provided against contagious diseases, either by this chapter, the by-laws passed thereunder, or the municipal by-laws, he may, of his own accord, notwithstanding the provisions of article 3889, proceed to carry out the same at once at the cost of the municipality in default."

## IX

New article added after article 3927:

"3927a. When any municipality has reason to believe that, owing to the carelessness of the authorities in a neighboring municipality, or one with which it is in communication, its territory is threatened with an invasion by some contagious disease, such municipality may, with the approval of the Superior Board of Health, take such measures as it may deem proper to prevent such invasion; and, particularly, may require from persons coming from the infected municipality a certificate to the effect that they are not afflicted with the sickness which is prevalent, and have not been exposed to catch it; or that, having had it, they have been disinfected in the manner required by law; and moreover, for small-pox, may require a certificate of vaccination."

## CONTAGIOUS DISEASES.

The table below shows the number of cases of contagious diseases either reported by the municipal authorities or else traced out by the officers of the Superior Board of Health. The notification of contagious diseases, which formerly was made directly to the main office of the Superior Board of Health, is now, in the eight organized sanitary districts, made to the district inspectors, who are thus enabled to immediately ascertain the adequacy of the measures taken by the municipal authorities. Moreover, the sanitary inspectors, residing in their districts, can, much better than the central office, supervise the regularity of these notifications by the municipal authorities.

## Small-pox.

Small-pox is not yet stamped out in the province, notwithstanding that with its service of the district-inspectors, the Superior Board has now more success in checking it in the municipalities where it appears. Faithfully observed, the measures of isolation and disinfection easily control small-pox; but, unfortunately, owing to the mild form taken by the disease, a great number of small-pox cases have passed, and still pass, unnoticed or are hidden from the sanitary authorities.

A great number of outbreaks of small-pox have been traced, during the year, to the infection of lumber camps in unorganized territories. With a medical supervision of these camps — a supervision which the new amendments to the Health Act permit to render compulsory — we hope to be able to suppress this source of the numerous infections that we observe on the breaking up of a camp, in which the nature of the disease had remained unknown in the absence of systematic medical inspection.

The experience of the last twenty years has amply proved that it is impossible to count on the municipalities to generalize anti-variolic vaccination. Notwithstanding that more than half of the municipalities in the province, under pressure of the Superior Board of Health, have enacted a by-law of compulsory vaccination, these municipal by-laws have almost everywhere remained a dead letter. Even when a municipality is invaded by small-pox, general vaccination is the sanitary measure which it hesitates most to order, although it would surely put an end to the possibility of propagation and would, in the end, save the funds of the municipality.

Every day experience proves that it is useless to wait for the education of the masses to pass a law for compulsory vaccination — and the province of Quebec is no exception. We will never have a law of compulsory vaccination if the legislature, to pass it, waits till there be an outcry asking for it!

The Board would wish to see, without any further delay, article 3958 of the Public Health Act (which article leaves the municipalities free to require vaccination), replaced by the following provisions which are an almost verbatim reproduction of the French law:

"Antivariolic vaccination is compulsory during the course of the first year of life; also revaccination during the eleventh and twenty-first years. Parents and guardians are held personally responsible for the execution of the said measure."

"In case of war, public calamity, epidemic or threatened epidemic, antivariolic vaccination or revaccination can be made compulsory, either by municipal order or by
